

Conley Product Bulletin

RUGGED TOP OF THE LINE PERFORMANCE ~ AFFORDABLE COST

**Conley Strainer
Types**

- Inline basket strainers in sizes from 1 ½” through 30”
- Inline Y-type basket strainers in sizes from 1 ½” through 4”

Description

- Conley basket strainers were introduced in 1994
- Extra heavy wall filament wound for service up to 150 psi
- 60 mil double Nexus® reinforced corrosion barrier (inner liner)
 - ▣ Premium epoxy resin liner
 - ▣ Premium vinyl ester resin liner
 - ▣ Premium novolac vinyl ester resin liner
 - ▣ Premium furan resin liner
 - ▣ Optional 100 mil liner available
- Premium aromatic amine cured epoxy cages for operating temperatures up to 275°F
- Color coding available
 - Conductive strainers available
- Fire-resistant strainers available
 - Abrasion-resistant liners available

Typical Applications

- Waste water treatment
- Steel pickling
- Solvents
- Petrochemical
- Pharmaceutical
- Chemical processing
- Jet fuel
- Gasoline – Diesel – Fuel Oil
- Cooling water
- Industrial waste
- Food and beverages
- Brine (salts) and brackish water

Performance

- Excellent chemical resistance inside and outside to a variety of caustics, acids, brines, and petroleum products ~ See the chemical resistance chart for fluid services
- Hydrostatic pressure testing at 225 psi

Specifications

- FRP standard basket
- Optional 316 stainless steel or polypropylene baskets available
- Basket perforations in 316 SS available from 325 mesh to ½” diameter
- Basket perforations in polypro available with 1/32”, 1/16”, 1/8” and 3/16” diameters
- O-ring standard is Viton with optional Hypalon, EPDM, and Buna-N
- Flanges conform to ANSI B16.5 bolt hole pattern
- Standard drain plug
- Optional pressure gage ports

Listings

- U.S. Federal Regulation FDA 21 CFR 175.300
- U.S. Federal Regulation FDA 21 CFR 177.2420

Conley Basket Strainers

Conley Basket Strainers offer three distinct advantages.

- 1) All glass fiber construction – no metal working parts to corrode.
- 2) Ease of serviceability – basket access cap is “*Fiber-Forged*” with a hex nut and slot combination for easy removal.
- 3) Baskets – standard FRP or 316 stainless steel or polypropylene are available with most any size perforation.

Conley Basket Strainers are available in Epoxy, Vinyl Ester, and Furan resin liner systems in standard 60 mil or optional 100 mil liner thicknesses. All liners are reinforced with multiple layers of Nexus®.

Conley Basket Strainers

Conley Basket Strainers offer complete corrosion protection both internally and externally.

Corrosion resistance plays an important part of Conley Basket Strainers with the availability of Epoxy, Vinyl Ester or Furan liner systems in standard 60 mil or optional 100 mil liner thicknesses. All liners are reinforced with multiple layers of Nexus®.

Light weight is another feature of Conley Basket Strainers; weighing approximately one-third of their metal counterparts.

O-Ring Materials

VITON® Fluorelastomer

Fluorocarbon; excellent chemical compatibility with a wide range of temperature and concentrations. Can be used in most applications of mineral acids, chlorinated hydrocarbons, salt solutions and petroleum oils. Temperature rating of 20°F to 300°F.

HYPALON®

Chlorosulfonated polyethylene; recommended for sodium chloride, chromic acid, hydrofluoric acid, sulphuric acid, hydrocarbon oils, salts, and others. Temperature rating of -5°F to 150°F.

EPDM

Ethylene-propylene diene; recommended for ozone, phosphate, ester, ketones, alcohols, glycols, concentrated sulphuric acid, bleaching (20%), alkaline solutions in general, treated water (with caustic soda, sodium sulphate, chlorine), and hot water. Temperature rating of -30°F to 250°F.

BUNA-N

Nitrile rubber; a general purpose elastomer recommended for sealing of water, oil, mild solvents and petroleum products. Not recommended for strong acids, ketones or halogenated hydrocarbons. Excellent abrasion and tear resistance. Temperature rating of -40°F to 200°F.

INSTALLATION

The following is the proper procedure for installation of Conley Basket Strainers. Conley Basket Strainers mate with all Class 150 ANSI B16.5 flat face flanges. Use only full face gaskets with a minimum thickness of 1/8" and having a Durometer rating of 50-70 on the Shore "A" scale. Always use a spacer ring if mating with raised face flanges.

- 1) Make sure all surfaces on both the strainer and flange mating surface are clean.
- 2) Check bolt holes of mating flanges for alignment. **Do not** attempt to install strainers that do not have proper alignment.
- 3) Check flange dimensions versus strainer dimensions and include proper allowance of space for gaskets.
- 4) Use SAE flat washers under both bolt and nuts.
- 5) Insert lubricated bolts.
- 6) Check mating flange faces for excessive distance or gap. **Do not** attempt to install strainers that have excessive distances or gaps to mating flanges.
- 7) Tighten nuts/bolts diametrically in stages using a torque wrench. Uniform tightness across the face of the flange will eliminate gasket leaks.

BOLT TORQUE REQUIREMENTS

Flange Size	Recommended Torque
1 1/2"	15 ft lbs
2"-4"	25 ft lbs
6"	45 ft lbs
